

I support the provisions of the Notice as written by the Commission. I am particularly pleased with the limitations on vanity applications, which I feel will materially reduce repeat applications seeking to remove selected calls from the available pool.

I also appreciate the changes to the amplifier regulations, especially the removal of the 50-watt minimum drive requirement. This may permit more flexibility in the operation of lower powered transceivers, permitting amateurs inclined to QRP ops to select transceivers well suited to that style of operation while allowing the availability of higher power without the added cost of an additional, higher powered exciter.

I also strongly support the ARRL band refarming proposal.
